New isolated Down's Syndrome-cell adhesion molecule - used to develop products for detection, diagnosis and therapy of developmental and neurological abnormalities Claim 2; Page 73-78; 109pp; English.

Claim 2; Page 73-78; 109pp; English.

C DS-CAM1, a cell surface glycoprotein belonging to a novel subclass of the 1g superfamily with highest homology to neural cell adhesion molecules. Its amino acid sequence was deduced from cDNA clones (see V31981) isolated from a trisomy 21 foetal brain library. A constance variant, DS-CAM2 (see W42087), which is non-membrane bound was also identified. The invention also provides human and murine DS-CAM nucleic acid sequences (see also V3198-88), expression vectors and host cells, transgenic animals, antibodies, antisense oligonucleotides, and primers derived from DS-CAM nucleic acid.

DS-CAM polypeptides are associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (regenerating) to damaged or severed peripheral nerves, and also in bioassays to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disulfide_bond

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Tue Jul 27 16:17:32 1999: MasPar time 21.88 Seconds 886.258 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: >US-08-956-991-2 (1-1910) from US08956991A.pep 13516

Sequence: 1 MWILALSLFQSFANVFSEDL......KAIGQVTSYICLHTLEWTFC 1910

Scoring table: PAM 150 Gap 11

Searched: 106580 seqs, 10152877 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-issued 1:5A_COMB 2:5B_COMB 3:PCT9_COMB 4:backfiles1

Statistics: Mean 39.122; Variance 235.804; scale 0.166

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Scoring table: PAM 150 Gap 11

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0\$ Listing first 45 summaries

Database: pir60 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 57.625; Variance 121.630; scale 0.474

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Tabular output not generated. Tue Jul 27 15:07:31 1999; MasPar time 52.29 Seconds 1032.554 Million cell updates/sec

Description: Perfect Score: Sequence: >US-08-956-991-2 (1-1910) from US08956991A.pep 13.16

Scoring table: PAM 150 Gap 11 1 MWILALSLFQSFANVFSEDL......KAIGQVTSYICLHTLEWTFC 1910

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37 1:swissprot

Statistics: Mean 58.685; Variance 101.910; scale 0.576

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
